RUN THIS PROJECT

Step-by-step setup and launch

For the project folder shown in your workspace

QUICK START

The project already has a Python environment in .venv314.

1 Open PowerShell in the project folder

The folder should contain app.py, resume_matcher.py, and requirements.txt. In File Explorer, open the project folder, click the address bar, type powershell, and press Enter.

2 Start the app

```
.\.venv314\Scripts\python.exe -m streamlit run app.py
```

This command uses the environment already included with the project. Keep the PowerShell window open while using the app.

3 Open the app in your browser

Streamlit prints a Local URL. Open it in a browser. The usual address is:

```
http://localhost:8501
```

4 Analyze a resume

- Upload a text-based PDF resume.
- Paste the job description and select Analyze match.
- Review the similarity score, matched terms, terms to review, and suggestions.

FIRST-RUN NOTE

The first analysis may download the language and sentence-matching models. Internet access may be needed; allow the download to finish.

RUN THIS PROJECT

Setup, shutdown & troubleshooting

Use this page if you are setting up from scratch or hit an error

FRESH SETUP (IF .venv314 DOES NOT WORK)

Run these commands from the project folder. Python 3.10 or newer is required.

```
py -m venv .venv
.venv\Scripts\Activate.ps1
python -m pip install -r requirements.txt
python -m spacy download en_core_web_sm
streamlit run app.py
```

OPTIONAL: RUN THE PROJECT TESTS

```
python -m unittest discover -s tests -v
```

COMMON FIXES

PowerShell blocks activation

Run Set-ExecutionPolicy -Scope Process -ExecutionPolicy Bypass, then activate the environment again. This affects only the current PowerShell window.

Command not found / wrong folder

In PowerShell run Get-ChildItem and confirm app.py is listed. Reopen PowerShell from the project folder.

Missing spaCy model

Run .\.venv314\Scripts\python.exe -m spacy download en_core_web_sm, then restart the app.

Port 8501 is already in use

Open the Local URL Streamlit prints; it may choose a different port such as 8502.

Scanned PDF has no readable text

The app reads text-based PDFs only; scanned/image-only PDFs are not OCR processed.

STOP THE APP

Return to the PowerShell window running Streamlit and press Ctrl+C.
